

ABSTRACT

[0029] A system of distributing electronic content has a network operations center generating a broadcast signal having digital electronic. A communication backbone is coupled to the network operations center. A base station receives the broadcast signal from the backbone. The base station receives the broadcast signal and forms a wireless local area network. The base station rebroadcasts at least a portion of the broadcast signal as a rebroadcast signal using the wireless local network. A user appliance is positioned with said local area network and receives the rebroadcast signal.
